

ABOUT GECKODRIVE INCORPORATED

Geckodrive Inc. will soon become a familiar name to all who use motion control products. We here at Geckodrive Inc. would like to introduce ourselves by showing you, our prospective customers, the lengths we have gone to in order to bring our product to you.

This picture shows the upgraded ultra-modern highway leading up to Geckodrive world corporate headquarters and west coast manufacturing plant.

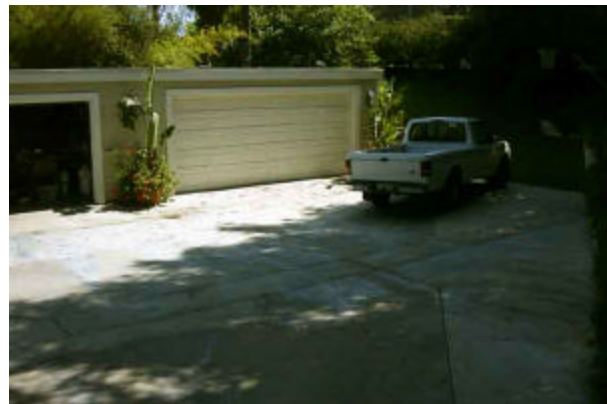

Hundreds of 18-wheel semi tractor trailers speed up and down this wide roadway daily, delivering newly manufactured G201s to eagerly waiting customers and returning with the raw materials

needed to keep the vast manufacturing plant humming.

A rigorous wildlife management program utilizing autonomous involuntary mechanical detention systems, chemical dissuasion and feral cats keeps the wildlife at bay to ensure our transportation fleet remains unmarred.

Pictured below is the Geckodrive world headquarters. From this gleaming modern citadel of capitalism flow the ideas and products the world has come to depend on.

Inside these walls some of the most creative minds in the world are conquering the most profound motion-control issues confronting us today.

An Intel 8080 based mainframe supercomputer running the latest CPM operating system is the centerpiece of Geckodrive's R&D

division. We can say with considerable pride that even the largest corporations don't have a mainframe in this class.

Pictured also is the corporate limousine reserved for the exclusive use of Geckodrive's CEO. Often it is used to transport him to meetings with other captains of industry. Imagine the impression this vehicle makes at these conferences!

Geckodrive is renown for its low cost motor drives at prices our competitors cannot match. They and others ask, "How do you do it?" Well, our innovative solution to labor cost containment is to utilize 12 year olds, and lots of them.

Our entire assembly, quality control and shipping departments are staffed exclusively with 12 year olds. Through a critically acclaimed community outreach program, "Keep Our Own Kids Occupied" (KOOKO), Geckodrive provides wholesome activities for these children 12 hours a day, seven days a week. When they graduate the program at age 16, all are happy to go back to school, knowing they can apply the discipline and work habits learned at Geckodrive to their schoolwork.

This program is not just altruistic; rather it is synergistic as well. In return Geckodrive gets a labor pool that responds well to behavior modification and is refreshingly innocent of knowledge about minimum wage laws, overtime and labor organization.

No matter how motivated a work force is, it cannot produce quality drives without top-notch tools and equipment. We here at Geckodrive recognize this and strive to provide our workers with the best that almost borders on obsession.

Pictured here is but a sample of the latest, state of the art electronic assembly and test equipment provided to our manufacturing work

force. Even non-technical visitors marvel at how these tools are used to produce our drives!

This concludes our tour of Geckodrive Inc. We hope it has given you insight in how our dynamically growing corporation synthesizes innovation with social consciousness to bring you the drives we make. We are sure that as a customer, you will discover pleasant surprises on your own about us, and that is no joke!
